### **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1 –8, 14, 17 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Each of the claims 1, 14, 17 and 19 have the language: "a length and width of a standard mail bin" or something to that effect. This renders the claims indefinite. What is a standard mail bin?

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1, 2, 4-10 and 12-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Ashbrook. The reference discloses a bottom defining a substantially planar surface having a length and a width (Fig. 1), wherein at least one of the length and the width substantially corresponds to at least one of a length and width of a standard mail bin; and at least one support

Art Unit: 3653

(9) projecting upright from the bottom, wherein the support is sized and configured to support flat mail in a substantially vertical orientation.

- 5. With regards to claim 2, the reference further discloses the insert comprises a lightweight material (page 1, lines 20+).
- 6. With regards to claim 4, the reference further discloses the insert comprises two supports (Fig. 1).
- 7. With regards to claim 5, the reference further discloses the bottom of the insert comprises three substantially coplanar sections which are separated from each other by the two supports, and wherein the two support have substantially triangular-shaped cross sections (Fig. 1).
- 8. With regards to claim 6, the reference further discloses the at least one support has a triangular-shaped cross section (Fig. 1).
- 9. With regards to claim 7, the reference further discloses the bottom and at least one support are created from a single piece of material (5).
- 10. With regards to claim 8, the reference further discloses the at least one support is created by folding the single piece of material (page 1, lines 20+).
- 11. With regards to claim 9, the reference further discloses at least one substantially vertical section projecting from a substantially horizontal section, wherein the insert is sized and configured to receive flat mail from an automatic mail sorter and the at least one substantially vertical section is configured to support flat mail in a substantially vertical orientation (Fig. 1).
- 12. With regards to claim 10, the reference further discloses the insert comprises a lightweight material (page 1, lines 20+).

- 13. With regards to claim 12, the reference further discloses the insert has two substantially vertical sections (Fig. 1).
- 14. With regards to claim 13, the reference further discloses the at least one substantially vertical section has a substantially triangular-shaped cross section (Fig. 1).
- 15. With regards to claim 14, the reference further discloses the insert has a length, and the length of the insert substantially corresponds to a length of a mail sorting bin (Fig. 1).
- 16. With regards to claim 15, the reference further discloses the insert comprises a single piece of material (page 1, lines 20+).
- 17. With regards to claim 16, the reference further discloses the insert is folded to create the substantially vertical sections and substantially horizontal sections (page 1, lines 20+).
- 18. With regards to claim 17, the reference further discloses the substantially vertical section has a height, and the height of the substantially vertical section approximates a height of a mail sorting bin (Fig. 1).
- 19. With regards to claim 18, the reference further discloses the insert comprises an anti-slip surface (page 1, lines 20+). What constitutes an anti-slip surface? The disclosed surface has some degree of friction and so has, to some extent, an anti-slip surface.
- 20. With regards to claim 19, the reference further discloses a base defining a substantially planar surface, wherein the base is sized to substantially cover a bottom surface of a mail sorting bin; and a plurality of substantially vertical supports attached to the base, wherein each substantially vertical support has a triangular-shaped cross section sized and configured to support flat mail in a substantially vertical orientation, and wherein the insert is configured to permit automatic sorting of flat mail into carrier walk sequence (Fig. 1).

Art Unit: 3653

21. With regards to claim 20, the reference further discloses a flat sheet, wherein the flat sheet includes a plurality of sections and a plurality of predefined fold lines, wherein two adjacent sections are separated by a predefined fold line, and wherein the predefined fold lines are arranged and configured such that when the flat sheet is folded at the predefined fold lines, the sheet forms a base and at least one upright support sized and configured to support flat mail in an upright orientation (Fig. 1; page 1, lines 20+).

- 22. With regards to claim 21, the reference further discloses the flat sheet has an upper surface and a lower surface, and wherein at least one predefined fold line permits a first section to rotate with respect to an adjacent second section in one direction, and wherein at least one predefined fold line permits a third section to rotate with respect to an adjacent fourth section in the other direction (Fig. 1; page 1, lines 20+).
- 23. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Lambert et al.

  The reference discloses a bottom defining a substantially planar surface (35) having a length and a width, wherein at least one of the length and the width substantially corresponds to at least one of a length and width of a standard mail bin; and at least one support (13) projecting upright from the bottom, wherein the support is sized and configured to support flat mail in a substantially vertical orientation.
- 24. With regards to claim 2, the reference further discloses the insert comprises a lightweight material (col. 3, lines 14+).
- 25. With regards to claim 3, the reference further discloses the insert comprises a material selected from the group consisting of cardboard, plastic, wood, and composites (col. 3, lines 14+).

- 26. With regards to claim 4, the reference further discloses the insert comprises two supports (Fig. 2).
- 27. With regards to claim 5, the reference further discloses the bottom of the insert comprises three substantially coplanar sections which are separated from each other by the two supports, and wherein the two support have substantially triangular-shaped cross sections (Fig. 2).
- 28. With regards to claim 6, the reference further discloses the at least one support has a triangular-shaped cross section (Fig. 2).
- 29. With regards to claim 7, the reference further discloses the bottom and at least one support are created from a single piece of material (col. 3, lines 14+).
- 30. With regards to claim 8, the reference further discloses the at least one support is created by folding the single piece of material (col. 3, lines 14+).
- 31. With regards to claim 9, the reference further discloses at least one substantially vertical section projecting from a substantially horizontal section, wherein the insert is sized and configured to receive flat mail from an automatic mail sorter and the at least one substantially vertical section is configured to support flat mail in a substantially vertical orientation (Fig. 2).
- 32. With regards to claim 10, the reference further discloses the insert comprises a lightweight material (col. 3, lines 14+).
- 33. With regards to claim 11, the reference further discloses the lightweight material is selected from the group consisting of cardboard, plastic, wood, and composites (col. 3, lines 14+).
- 34. With regards to claim 12, the reference further discloses the insert has two substantially vertical sections (Fig. 2).

- Page 7
- 35. With regards to claim 13, the reference further discloses the at least one substantially vertical section has a substantially triangular-shaped cross section (Fig. 2).
- 36. With regards to claim 14, the reference further discloses the insert has a length, and the length of the insert substantially corresponds to a length of a mail sorting bin (Fig. 2).
- 37. With regards to claim 15, the reference further discloses the insert comprises a single piece of material (col. 3, lines 14+).
- 38. With regards to claim 16, the reference further discloses the insert is folded to create the substantially vertical sections and substantially horizontal sections (col. 3, lines 14+).
- 39. With regards to claim 17, the reference further discloses the substantially vertical section has a height, and the height of the substantially vertical section approximates a height of a mail sorting bin (Fig. 2).
- 40. With regards to claim 18, the reference further discloses the insert comprises an anti-slip surface (col. 3, lines 14+). What constitutes an anti-slip surface? The disclosed surface has some degree of friction and so has, to some extent, an anti-slip surface.
- 41. With regards to claim 19, the reference further discloses a base defining a substantially planar surface, wherein the base is sized to substantially cover a bottom surface of a mail sorting bin; and a plurality of substantially vertical supports attached to the base, wherein each substantially vertical support has a triangular-shaped cross section sized and configured to support flat mail in a substantially vertical orientation, and wherein the insert is configured to permit automatic sorting of flat mail into carrier walk sequence (Fig. 2).
- 42. With regards to claim 20, the reference further discloses a flat sheet, wherein the flat sheet includes a plurality of sections and a plurality of predefined fold lines, wherein two

in an upright orientation (col. 3, lines 14+).

Art Unit: 3653

adjacent sections are separated by a predefined fold line, and wherein the predefined fold lines are arranged and configured such that when the flat sheet is folded at the predefined fold lines, the sheet forms a base and at least one upright support sized and configured to support flat mail

- 43. With regards to claim 21, the reference further discloses the flat sheet has an upper surface and a lower surface, and wherein at least one predefined fold line permits a first section to rotate with respect to an adjacent second section in one direction, and wherein at least one predefined fold line permits a third section to rotate with respect to an adjacent fourth section in the other direction (col. 3, lines 14+).
- 44. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Henig. The reference discloses a bottom (2a) defining a substantially planar surface having a length and a width, wherein at least one of the length and the width substantially corresponds to at least one of a length and width of a standard mail bin; and at least one support (7a) projecting upright from the bottom, wherein the support is sized and configured to support flat mail in a substantially vertical orientation (Fig. 11).
- 45. With regards to claim 2, the reference further discloses the insert comprises a lightweight material (col. 7, lines 10+).
- 46. With regards to claim 3, the reference further discloses the insert comprises a material selected from the group consisting of cardboard, plastic, wood, and composites (col. 7, lines 10+).
- 47. With regards to claim 4, the reference further discloses the insert comprises two supports (Fig. 11).

Art Unit: 3653

48. With regards to claim 5, the reference further discloses the bottom of the insert comprises three substantially coplanar sections which are separated from each other by the two supports, and wherein the two support have substantially triangular-shaped cross sections (Fig. 11).

- 49. With regards to claim 6, the reference further discloses the at least one support has a triangular-shaped cross section (Fig. 11).
- 50. With regards to claim 7, the reference further discloses the bottom and at least one support are created from a single piece of material (col. 7, lines 10+).
- 51. With regards to claim 8, the reference further discloses the at least one support is created by folding the single piece of material (col. 7, lines 10+).
- 52. With regards to claim 9, the reference further discloses at least one substantially vertical section projecting from a substantially horizontal section, wherein the insert is sized and configured to receive flat mail from an automatic mail sorter and the at least one substantially vertical section is configured to support flat mail in a substantially vertical orientation (Fig. 11).
- 53. With regards to claim 10, the reference further discloses the insert comprises a lightweight material (col. 7, lines 10+).
- 54. With regards to claim 11, the reference further discloses the lightweight material is selected from the group consisting of cardboard, plastic, wood, and composites (col. 7, lines 10+).
- 55. With regards to claim 12, the reference further discloses the insert has two substantially vertical sections (Fig. 11).
- 56. With regards to claim 13, the reference further discloses the at least one substantially vertical section has a substantially triangular-shaped cross section (Fig. 11).

57. With regards to claim 14, the reference further discloses the insert has a length, and the length of the insert substantially corresponds to a length of a mail sorting bin (Fig. 11).

- 58. With regards to claim 15, the reference further discloses the insert comprises a single piece of material (col. 7, lines 10+).
- 59. With regards to claim 16, the reference further discloses the insert is folded to create the substantially vertical sections and substantially horizontal sections (col. 7, lines 10+).
- 60. With regards to claim 17, the reference further discloses the substantially vertical section has a height, and the height of the substantially vertical section approximates a height of a mail sorting bin (Fig. 11).
- 61. With regards to claim 18, the reference further discloses the insert comprises an anti-slip surface (col. 7, lines 10+). What constitutes an anti-slip surface? The disclosed surface has some degree of friction and so has, to some extent, an anti-slip surface.
- 62. With regards to claim 19, the reference further discloses a base defining a substantially planar surface, wherein the base is sized to substantially cover a bottom surface of a mail sorting bin; and a plurality of substantially vertical supports attached to the base, wherein each substantially vertical support has a triangular-shaped cross section sized and configured to support flat mail in a substantially vertical orientation, and wherein the insert is configured to permit automatic sorting of flat mail into carrier walk sequence (Fig. 11).
- 63. With regards to claim 20, the reference further discloses a flat sheet, wherein the flat sheet includes a plurality of sections and a plurality of predefined fold lines, wherein two adjacent sections are separated by a predefined fold line, and wherein the predefined fold lines are arranged and configured such that when the flat sheet is folded at the predefined fold lines,

the sheet forms a base and at least one upright support sized and configured to support flat mail in an upright orientation (col. 7, lines 10+).

- 64. With regards to claim 21, the reference further discloses the flat sheet has an upper surface and a lower surface, and wherein at least one predefined fold line permits a first section to rotate with respect to an adjacent second section in one direction, and wherein at least one predefined fold line permits a third section to rotate with respect to an adjacent fourth section in the other direction (col. 7, lines 10+).
- 65. Claims 1-4, 7, 9-12, 14, 15, 17 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Stevenson. The reference discloses a bottom (30) defining a substantially planar surface having a length and a width, wherein at least one of the length and the width substantially corresponds to at least one of a length and width of a standard mail bin; and at least one support (54) projecting upright from the bottom, wherein the support is sized and configured to support flat mail in a substantially vertical orientation (Fig. 8).
- 66. With regards to claim 2, the reference further discloses the insert comprises a lightweight material (col. 3, lines 59+).
- 67. With regards to claim 3, the reference further discloses the insert comprises a material selected from the group consisting of cardboard, plastic, wood, and composites (col. 3, lines 59+).
- 68. With regards to claim 4, the reference further discloses the insert comprises two supports (Fig. 8).
- 69. With regards to claim 7, the reference further discloses the bottom and at least one support are created from a single piece of material (col. 3, lines 59+).

Art Unit: 3653

70. With regards to claim 9, the reference further discloses at least one substantially vertical section projecting from a substantially horizontal section, wherein the insert is sized and configured to receive flat mail from an automatic mail sorter and the at least one substantially vertical section is configured to support flat mail in a substantially vertical orientation (Fig. 8).

- 71. With regards to claim 10, the reference further discloses the insert comprises a lightweight material (col. 3, lines 59+).
- 72. With regards to claim 11, the reference further discloses the lightweight material is selected from the group consisting of cardboard, plastic, wood, and composites (col. 3, lines 59+).
- 73. With regards to claim 12, the reference further discloses the insert has two substantially vertical sections (Fig. 8).
- 74. With regards to claim 14, the reference further discloses the insert has a length, and the length of the insert substantially corresponds to a length of a mail sorting bin (Fig. 8).
- 75. With regards to claim 15, the reference further discloses the insert comprises a single piece of material (col. 3, lines 59+).
- 76. With regards to claim 17, the reference further discloses the substantially vertical section has a height, and the height of the substantially vertical section approximates a height of a mail sorting bin (Fig. 8).
- 77. With regards to claim 18, the reference further discloses the insert comprises an anti-slip surface (col. 3, lines 59+). What constitutes an anti-slip surface? The disclosed surface has some degree of friction and so has, to some extent, an anti-slip surface.

Art Unit: 3653

78. Claims 9 –12, 14, 17 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Pippin et al.

- 79. With regards to claim 9, the reference further discloses at least one substantially vertical section projecting from a substantially horizontal section, wherein the insert is sized and configured to receive flat mail from an automatic mail sorter and the at least one substantially vertical section is configured to support flat mail in a substantially vertical orientation (Fig. 23).
- 80. With regards to claim 10, the reference further discloses the insert comprises a lightweight material (col. 2, lines 23+).
- 81. With regards to claim 11, the reference further discloses the lightweight material is selected from the group consisting of cardboard, plastic, wood, and composites (col. 2, lines 23+).
- 82. With regards to claim 12, the reference further discloses the insert has two substantially vertical sections (Fig. 23).
- 83. With regards to claim 14, the reference further discloses the insert has a length, and the length of the insert substantially corresponds to a length of a mail sorting bin (Fig. 23).
- 84. With regards to claim 17, the reference further discloses the substantially vertical section has a height, and the height of the substantially vertical section approximates a height of a mail sorting bin (Fig. 23).
- 85. With regards to claim 18, the reference further discloses the insert comprises an anti-slip surface (col. 2, lines 23+). What constitutes an anti-slip surface? The disclosed surface has some degree of friction and so has, to some extent, an anti-slip surface.
